

ES-7 Research and Development

Assessment: High Priority. Bin B. 16 out of 22 votes.

Utah should consider providing support and/or funding for targeted R&D for renewable energy and energy storage. Such R &D may prove very helpful in reducing carbon emissions, while spurring economic development opportunities and technological innovation. As compared with other energy resources and technologies, there is currently very little R&D for renewables being undertaken in Utah. (see also CC-4).
